

Challenge

Samsung launched a range of premium smartphone models, such as the Galaxy S, Fold, and Flip. The client requested our assistance in devising a solution to safeguard against potential data breaches during the manual development process.

Hansem Global's Solution

Hansem Global overcame the challenge by deploying a “Clean Room Operation”.

We set up a clean room exclusively dedicated to the development of user manuals for Samsung's flagship models, incorporating stringent security protocols and uninterrupted surveillance.

- Implementation of triple access control for authorized personnel,
- Sealing USB ports and blocking the use of portable storage,
- Covering camera lenses with security seals,
- Blocking internet access,
- Enforcing additional security pledges with the teams involved in the flagship projects,
- 24/7 surveillance with high-resolution CCTV cameras.

Result

Zero Security Breach Incident

The clean room at Hansem Global effectively prevented any security breach incidents while our team worked on the flagship model projects. This accomplishment instills a sense of pride in our robust security management capabilities.
